NPC CREDIT TRANSFER SCHEME
CUSTOMER-TO-BANK
RECOMMENDED IMPLEMENTATION GUIDELINES

Abstract	This document sets out the recommended rules for implementing Version 1.0 of the 2020 NPC Credit Transfer Scheme Rulebook based on version 2009 of the customer-to-bank credit transfer ISO 20022 XML message standards.
Document Reference	NPC003-01
Issue	2020 Version 1.0
Date of Issue	27 March 2020
Reason for Issue	Approval for publication March 2020 by NPC Scheme Management Committee
Circulation	Publicly available
Effective date	19 December 2020

0.2 Change History

Issue number	Dated	Reason for revision
2019 v0.9	2019-01-18	DRAFT by Workstream Rulebook
2019 v0.91	2019-02-24	Final version from P27-project handed over to the NPC
2020 v0.92	2019-0319	Updated version by the NPC with changes to terminology and nomenclature for the NPC.
2020 v0.93	2019-04-03	Updated version by the NPC WG Rulebook.
2020 v0.99	2019-06-07	First version for open consultation decided by the NPC Board.
2020 v0.991	2019-08-22	Minor layout changes
2020 v0.992	2020-03-12	Updates version based on Public Consultation of NPC Rulebook and suggestions from the NPC Credit Transfer and NPC Instant Credit Transfer Working Group (NCT & NCT Inst WG) and sent to SMC for decision.
2020 v.1.0	2020-03-27	Decided by NPC Scheme Management Committee (SMC) 26 Mars 2020.

0.3 Purpose of Document

The objective of these Guidelines is to define the recommended rules to be applied to the ISO 20022 XML message standards for the implementation of the NPC Credit Transfers in the customer-to-bank space.

1. Introduction

This document sets out the NPC recommended rules for implementing the credit transfer ISO 20022 XML initiation message standards. The NPC Credit Transfer Scheme Rulebook defines data sets which are implemented in the relevant ISO 20022 XML message standard of which the following are covered:

NPC Credit Transfer Scheme Rulebook	ISO 20022 XML Message Standards
DS-01 *Customer to Bank Credit Transfer Information*	Customer Credit Transfer Initiation (pain.001.001.03)
DS-04 *Bank to Customer Credit Transfer Information*	Statements/advice ISO 20022 XML standards are covered separately.
Reject based on DS-03 for the Bank to Customer reject	Reject – Customer Payment Status Report (pain.002.001.03)

The Guidelines for the customer-to-bank and bank-to-customer XML message standards are a recommendation from the NPC on how to support the XML message standards at the request of the Originator or Beneficiary. This means that a Scheme Participant is recommended to accept the messages as described in these guidelines.

1.1 Coverage of the NPC customer-to-bank Implementation Guidelines

The purpose of the NPC customer-to-bank Implementation Guidelines, hereafter referred to as the Guidelines, is to provide guidance on the use of the payment initiation ISO 20022 XML standards (the 'pain' messages) in initiating NPC core payments as defined in the NPC scheme rulebooks and supplemented by processing requirements.

The Guidelines are fully aligned to the NPC core requirements when defined in the Rulebook and identify message elements needed for initiating NPC payments while recognizing message elements that may be available for use in Additional Optional Services (AOS), as shown below.

Global ISO 20022 XML Message Standards			
Message elements from the ISO messages corresponding to Rulebook requirements	Message elements that are mandatory in the ISO messages or needed for Processing	Message elements from the ISO messages available for use by AOS within an NPC Governance framework	Message elements from ISO messages not applicable to NPC
NPC Implementation Guidelines for NPC Core subset, identifying elements - **to be used as defined in ISO** - **to be used with NPC usage rules (from or completing the Rulebook)** **Note: yellow fields can be used in a specific way for an AOS.**		To be developed and documented by AOS Communities	Not available for use in NPC payments
NPC Payments			

<p align="center">Figure 1</p>

These Guidelines define the NPC Core Mandatory Subset[2] of the Global ISO 20022 XML standard that consists of message elements:

- required in the Rulebook as business requirements
- needed for processing by banks, clearing and settlement mechanisms and bank customers

Elements needed for specific national regulatory requirements are not considered in these guidelines. They have to be dealt with at national level without being regarded as an AOS.

These message elements define the **NPC core service** and are denoted by yellow shading in the message structures given in the following chapters. Only these elements are further detailed with relevant NPC core requirements, such as the use of the message element, its components or the values that must be used. Usage rules, for example, may indicate limits on the number of repetitions, or code value restrictions, while format rules may be used to indicate the allowable combinations of components of a message element.

These Guidelines also recognise message elements and the usage rules in the ISO 20022 XML standard that may be available for use in an AOS, subject to a governance framework to be defined by the NPC. The definition and documentation of these message elements are a matter for the AOS communities involved. These message elements are denoted by white shading.

Where there are message elements that do not apply to NPC payments, these are denoted with red shading in the right-most column of the message structures. To date, few such message elements have been identified.

1.2   Use of these Guidelines by the instructing and instructed parties[3]

- NPC core payments are executed using messages only containing message elements defined as part of the NPC Core Subset (shaded yellow in Figure 2).
- Payments that include message elements that are defined and documented by AOS communities (shaded white/yellow in Figure 2) are considered as NPC payments, but not as NPC core payments.

---

[2] The NPC Core Mandatory Subset is hereafter known as the NPC core service.
[3] Instructing and instructed parties include CSMs.

- It is the responsibility of the instructing customer and instructed bank of the message to ensure that message elements defined for use in an AOS are only included in messages sent to AOS community members.

- The instructed bank receiving a message containing AOS message elements, but which is not a member of this AOS community, may ignore the information, that is, not use it for processing, nor forward it to the next party in the chain. The instructed bank, however, may reject the message for this reason.

1.3 Notation Conventions

The Guidelines are presented in a similar format than the one used in the ISO 20022 XML standard.

#	NPC Mul	Message Element	NPC Core Requirements
1.00	1..1	Message root +Group Header ++Sublevel 1 +++Sublevel 2	*NPC Usage Rule(s) (e.g. Mandatory)* *NPC Format Rule(s)* **ISO Name** **ISO Definition** **XML Tag** **Type** (Yellow: Message Element that is part of the NPC Core Service)
	1..1		**XML Tag** xs:choice
1.01	1..1	Message root +Group Header ++Sublevel 1 +++Sublevel 2 ++++Sublevel 3	*NPC Rulebook (Attribute used in Rulebook)* *NPC Usage Rule(s) (e.g. Only 'NPCT' is allowed.)* **ISO Name** **ISO Definition** **XML Tag** **Type** **ISO Length** *NPC Length* (Yellow: Message Element that is part of the NPC Core Service)
			NPC Code restrictions
			NPCT NPC Payment must be executed following the NPC Payment scheme.
1.02	1..1	Message root +Group Header ++Sublevel 1 +++Sublevel 2 ++++Sublevel 3	**ISO Name** **ISO Definition** **XML Tag** **Type** (White: Message Element that is not part of the Core Service but is available for use in a NPC AOS)
1.0n	0..1	Message root +Group Header ++Sublevel 1	**ISO Name** **ISO Definition** **XML Tag** **Type** (Red: Message Element that is not to be used in NPC Payments)

Figure 2

Where:

- Column 1 indicates the message element Index number specific to these Implementation Guidelines. As a result, the Index numbers differ from the ones used in the relating ISO 20022 Message Definition Report, PDF version.

- Components of message elements that are not allowed in NPC payments or where no NPC requirements are defined are not displayed in full as the ISO 20022 XML standard applies.

- Column 2 indicates the mandatory or optional status and the number of repetitions defined by the NPC Core Requirements, e.g.:
    - 0..1 element is optional and may only be present once
    - 0..n element is optional with unlimited repetition
    - 1..1 element is mandatory and must be present exactly once
    - 1..n element is mandatory with unlimited repetition

The displayed NPC multiplicity may thus differ from the one of the ISO 20022 XML standard. When an element is shaded yellow, possible remaining ISO 20022 occurrences are available for use in an AOS.

Empty elements are not allowed (i.e. a message shall not contain elements without content).

- Column 3 indicates the full path of an element where the last line contains the name of the message element as defined in the ISO 20022 XML standard. When an element contains sub-elements, these are indented to the right and noted with a plus sign (+) per level.
- Column 4 specifies in italic characters the NPC Core Requirements as additional rules to those specified in the ISO 20022 XML standard, which are shown in non-italic characters.
    - When defined in the Rulebook, the attribute is indicated by the attribute name and where applicable, the number, i.e., AT-nn. Those message elements are shaded yellow.
    - When the message element relates to interbank processing requirements, it is shaded yellow.
    - When the message element specified in the ISO 20022 XML standard is used for NPC payments without change (regarding the definition and any usage rules), no specific NPC Core requirements are provided and is shaded yellow.
    - When the message element is specified in the ISO 20022 XML standard as optional, but is mandatory in NPC Core requirements, this is specified as 'Mandatory' and is shaded yellow.
    - When the message element is not available for use in NPC payments, this is indicated with red shading. Note that these message elements are similarly not available for use in an AOS.
    - The NPC length is indicated for every message element (if applicable), even if it is the same length as in the ISO 20022 XML standard.

Column 4 may also indicate conditional relationships between components of a message element, for example, either component 1 or component 2 must be present, but not both (indicated, in empty lines without index number, in the column 4 with XML Tag 'xs:choice'). In such case, the choice is to be made between the two following sub-elements, if both are shaded yellow.

1.4 Character Set

The character set issue centres on the use of the full set characters in the message elements. Two considerations are:

- While banks and their customers must be allowed to use the character set currently in use at national level,
- banks and their customers cannot be required to support the full character set used in ISO 20022 XML messages.

Therefore:

- The ISO 20022 XML messages allow for the full range of global language requirements (UTF-8).

- Banks and their customers must be able to support the Latin character set commonly used in international communication and in addition to this the Scandinavian characters and the @-sign, as follows:

  a b c d e f g h i j k l m n o p q r s t u v w x y z å ä ö æ ø
  A B C D E F G H I J K L M N O P Q R S T U V W X Y Z Å Ä Ö Æ Ø
  0 1 2 3 4 5 6 7 8 9
  / - ? : ( ) . , ' + @
  Space

- References, identifications and identifiers must respect the following [8]:
  - Content is restricted to the Latin character set including the Scandinavian characters and the @-sign as defined above
  - Content must not start or end with a '/'
  - Content must not contain '//'s

However, there may be bilateral or multilateral agreements to support one or more sets of characters beyond the Latin character set and the additional Scandinavian characters referred to above.

1.5 General Message Element Specifications

1.5.1 BIC

The BIC used to identify financial institutions (Agents in the ISO 20022 XML standards) may be either BIC 11 or BIC 8.

1.5.2 Currency

Unlike the EPC SEPA Credit Transfer Rulebook, the NPC Credit Transfer Rulebook allows more than one currency. Currencies covered by the scheme are called 'Scheme Currencies' and are listed in the reference document *Scheme Currencies* [9].

1.5.3 Alias and Proxy

In the Nordic payment market it is common that an 'Alias' or 'Proxy' is used to identify an Originator's and/or a Beneficiary's account. Therefore, ISO 20022 elements in the Debtor Account and Creditor Account sections are utilized in order to enable (Originators) to initiate their payment from – and to - an 'Alias' or 'Proxy' instead of an IBAN, and for Beneficiaries to still be able to collect payments through an 'Alias' or 'Proxy' instead of their IBAN. NPC usage is described in the NPC Credit Transfer Scheme Interbank Implementation Guideline in the Debtor Account and Creditor Account sections. For ease of use, National Account Number Structure will be treated as an Alias, too.

1.5.4 Structured creditor references, e.g. OCR-references

In the Nordic payment market there is a legacy to use one of the existing OCR references. These references are only used in combination with a corresponding 'Alias', where the Alias registry holds information regarding the validation rule for the reference or a corresponding bank account. Therefore, when Originators has entered an OCR-reference it is mandatory that the Originator Bank (Debtor Bank) validates the 'structured creditor reference' thru checking the rule for validation connected to the 'Alias', 'Proxy' or bank account to ensure the correctness of the OCR-reference.

In the Nordic payment market there is a legacy to use one of the existing OCR references. These references are only used in combination with a corresponding 'Alias', where the Alias registry holds information regarding the validation rule for the reference or a corresponding bank account. Therefore, when customers (Originators) has entered an OCR-reference it is mandatory that the Originator Bank (Debtor Bank) validates the 'structured creditor reference' thru checking the rule for validation connected to the 'Alias', 'Proxy' or bank account to ensure the correctness of the OCR-reference.

1.5.5 Extended remittance information, up to 999 occurrences of structured references

In the Nordic payment market it is a market practice to be able to enter remittance data with more than one occurrence of structured reference. Therefore, when using Extended Remittance Information, the Originator can refer to up to 999 invoices and credit notes in structured format to each Credit Transfer payment. It is recommended that all references have a referred document amount and it is recommended that the Originator Bank (Debtor Bank) ensures that the amount of the Credit Transfer equals the sum of the amounts of the referred references.

In comparison with EPC IGs, the NPC IGs do not use a specific attribute (AT-61 and AT-62 in EPC IGs) for the Extended remittance information. Instead the same attribute – AT-05 – is used for both payments with Extended Remittance Information and payments without.

The ERI-option supports the transmission and the processing of the following combination of RI in Credit Transfer Instructions and Transactions:

- One occurrence of 140 characters of unstructured RI and

- Up to 999 occurrences of 280 characters of structured RI based on the ISO 20022 standard or OCR-references described as above. The Originator can refer to up to 999 invoices and credit notes in structured format to each Credit Transfer payment. All references must also have a referred amount and be of the same currency.

When using more than one occurrence of the structured remittance information extended remittance information, ERI) both the structured and the unstructed reference must be used. In case of returns, rejects or similar R-messages only the unstructured remittance information sent by the Originator to the Beneficiary in the NPC Credit Transfer Instruction needs to be forwarded.

1.6 Implementation of ISO 20022 XML rules

This document should be read in conjunction with the ISO 20022 XML message standards.

2 Recommended customer-to-bank and bank-to-customer messages

2.1 Customer to Bank Credit Transfer Information (DS-01)

2.1.1 Use of the Customer Credit Transfer Initiation (pain.001.001.03)

The message is used to transport the customer-to-bank Credit Transfer Information sent by the Originator to the Originator Bank.

The message caters for bulk and single payment instructions.

#	NPC Mult	Message Element	Customer to Bank Credit Transfer Information NPC Core Requirements	
		Document	**XML Tag**	Document
			Type	Document
	1..1	Customer Credit Transfer Initiation V03	**ISO Name**	Customer Credit Transfer Initiation V03
			ISO Definition	The CustomerCreditTransferInitiation message is sent by the initiating party to the forwarding agent or debtor's agent. It is used to request movement of funds from debtor's account to a creditor.

2.2 Bank to Customer Reject Credit Transfer Dataset (based on DS-03)

Caution: These Guidelines are not sufficient to fully implement this message and require additional information under bilateral agreement between the customer and its bank. The Rulebook in addition does not specify the dataset requirements. These Guidelines include Reject Credit Transfer only.

2.2.1 Recommended use of the Customer Payment Status Report (pain.002.001.03)

The code 'RJCT' must be used in 'Group Status', or 'Payment Information Status' or 'Transaction Status', to transport the Credit Transfer Reject instruction between the banks and their remitting customers.

The message can also be used to return instructions of NPC Credit Transfers with Extended Remittance Information (ERI) whereby only the unstructured remittance information sent by the Originator to the Beneficiary in the NPC Credit Transfer Instruction will be forwarded. The message caters for bulk and single reject instructions.

Note: Attribute AT-R1 'The Type of R-message' in DS-03 is implied by the 'Message Name', 'pain.002.001.03', the 'Original Message Name Identification' set to 'pain.001.001.03', 'Group Status' or 'Payment Information Status' or 'Transaction Status' set to 'RJCT'.

Note: Attribute AT-R4 'The Settlement Date for the Return' is not applicable to reject instructions.

Note: Message elements under 'Original Transaction Reference' sequence are based on DS-01 or DS-02 attributes.

2.2.2 Message Element Specifications

The examples of reasons for a reject received from a bank or CSM which are passed on to the debtor present in the Rulebook are mapped to ISO codes in the table below. Other ISO codes may be used when the Debtor Bank has rejected the message.

ISO Code	ISO Name	NPC Core Reason as specified in the Rulebooks
AC01	IncorrectAccountNumber	Account identifier incorrect (i.e. invalid IBAN)
AG02	InvalidBankOperationCode	Operation/transaction code incorrect, invalid file format *Usage Rule*: To be used for incorrect operation/transaction code.
